COMMENT

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >- 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc MAPPING INFORMATION:

The clone sequenced to the left is RP11-332L11, 200 bp overlap. Actual start of this clone is at base position 86134 of RP11-332L11; actual end is at base position 68770 of RP11-154L2 donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male NEIGHBORING SEQUENCE INFORMATION: http://bacpac.med.buffalo.edu) OI RP11-154L24.

FEATURES repeat\_region repeat\_region source repeat\_region repeat\_region The clone RP11-154124 contains a tandem repeat from base positions 38234 to 39039, this region contains some low quality data. The assembly is consistent with the restriction digest information. NOTE: This is a 'working draft' sequence. It currently consists of 43 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanses, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pleter de Jong and coworkers at the Roswell Park Cancer Institute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The clone sequenced to the left is RP11-32P22, 200 bp overlap; the clone sequenced to the right is RP11-122E16. Actual start of this clone is at base position 149634 of RP11-32P22; actual end is at base position 136868 of RP11-422A6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence was finished as follows unless otherwise noted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     identifying clones that may be generich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTE: This record contains 61 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for                                          On Feb 27, 2001 this sequence version replaced gi:12831877. On Feb 27, 2001 this sequence version replaced gi:12831877. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               repeat_region
                                                                                                             repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality > 3); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following absembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT, Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IMPORTANT: This sequence is not the entire insert of clone RP11-592B10 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RP11-411F9 is at 47873 in this sequence true right end of clone RP5-1007B16 is at 100 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This PCR primer (with primers AAT79542-44) flanks the TATA box sequence cupstream of the uridine diphosphate glucuronosyltransferase (UGT) gene ct 11 exon 1 (see AAT79540), and was used to amplify fragments of 253-255 CC bp. This gene is known to be associated with Gilbert's syndrome (GS). GS ct is a mild, common form of unconjugated hyperbilirubinaemia associated CC with reduced bilirubin glucuronidation capacity. Analysis of the genetic consist of GS has allowed 2 forms to be identified. One is a mild form cassociated with a homozygous 2 bp insertion in the TATA sequence cupstream of the UGT1*1 exon 1, and the other is a more severe form cassociated with heterozygosity for a mutation which, when homozygous, causes Crigler-Najjar type 2 disease. The first form is autosomal consused Crigler-Najjar type 2 disease. The first form is autosomal consist ve and the second is inherited dominantly. Patients suffering from CG inficult to determine if an effect is due to the dury or the syndrome. CC Drug trial efficiency would be improved if potential participants can be consist of them possessing or not possessing GS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

cc gene 1*1 excu 1. This gene is known to be associated to gene 1*1 excu 1. This gene is known form of unconjugated cc syndrome (GS). GS is a mild, common form of unconjugated cc syndrome (GS). GS is a mild, common form of unconjugated cc syndrome (GS). GS is a mild form the common form of the glucuronidation cc capacity, Analysis of the genetic basis of GS has allowed 2 forms to be identified. One is a mild form associated with homozygous 2 bp compared to the conterior of the GT1*1 excun 1, and cc mutation which, when homozygous, causes Crigier-Najjar type 2 disease. Cc The first form is aucosomal recessive and the second is inherited community. Patients suffering from GS, which is benign, may have altered metabolism of some drugs, making it difficult to determine if an cc effect is due to the drug or the syndrome. Drug trial efficiency would be improved if potential participants can be screened for the genetic cc basis of GS, and eliminated or included on basis of them possessing or of the UGT gene, using the primers described in AAT79541-44.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      22222

                                                                                                                                                                                                                                                                                                                                                           haemochromatosis (HFE) gene mutation in an individual comprising:

(C (a) providing DNA or RNA from the individual; and (b) assessing the
DNA or RNA for the presence or absence of a haplotype or genotype where

the presence or absence of the haplotype genotype indicates the likely
presence of the HFE gene mutation in the genome of the individual. The
HFE gene sequences from the present invention can be used to develop
products for use in the diagnosis and treatment of HFE. The present
invention also describes BTF genes, which are homologues of the milk
protein butyrophilin (BT), and can be used in the production of agonists
and antagonists of BT function. Also described are: (1) a Roket gene
which can be used to develop products for the study, diagnosis and
treatment of lupus and Sjogren's syndrome; and (2) NPT3 and NPT4 genes
thich are homologues of a type 1 sodium transport gene, and can
similarly be used for hypophosphatemia.
                                                                                                                                 Matches

                                          The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORR has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oliqo-dT primed cDNA ilbraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human secreted protein 5' EST, SEQ ID NO: 29791.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAC25716;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAC25716 standard; cDNA; 260 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         06-OCT-2000

The present sequence encodes an endo-beta-mannanase enzyme, which is involved in the hydrolysis of polysaccharides that consist of molecules of mannan, either simple or branched, linked together by beta (1-4) bonds. The mannanase polysucleotide sequence is used for in vivo modification of the coffee endo-beta-mannanase gene. It is also used to produce transgenic plant cells (especially coffee cells) which have modified properties of mannan polysaccharide, and thus altered flavour or structure. The enzyme is used for modification, degradation or synthesis of mannan polysaccharides in vitro, particularly to treat coffee beans to increase the percentage of dry matter extraction, and thus reduce the quantity of sediment.
                                                                                                                                                                                                                      Claim

cc assays, predictive medicine and therapeutic and prophylatic methods of treatment. The methods may be used to diagnose and treat patients which cc are suffering from a disorder associated with abnormal level or rate of apoptotic cell death, abnormal activity of the FrsyApo-1 receptor complex, abnormal activity of the TNF receptor complex, or abnormal concerns a concern complex, or abnormal activity of the TNF receptor complex, or abnormal concerns complex, abnormal activity of the TNF receptor complex, or abnormal concerns con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes the isolation of novel human caspase recruitment domain, CARD-3 and CARD-4 polynucleotides and proteins and partial murine CARD-41 protein and genes. The genes and proteins of the invention are involved in the regulation of caspase activation. The caspase recruitment domain (CARD) polynucleotides, polypeptides, homologues and antibodies can be used in screening assays, detection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of the human caspase recruitment commain 4 (CARD-4) gene on chromosome 7. CARD-4 exists in at least 4 forms, 1.e. the long form CARD-41 (see AAB20081), the short form CARD-42 (see AAB20081), and splice variants CARD-47 (see AAB20082) and CARD-42 (see AAB20082). It is an intracellular protein predicted to be involved in regulating caspase activation. It activates the NF-kappaB pathway and enhances caspase 9-mediated cell death. Methods of diagnosing and treating patients suffering cell death. Methods of diagnosing and treating patients suffering cell death, abnormal activity of the Fas/APO-1 receptor complex, abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of a caspase involve administering a compound that modulates the expression or activity of CARD-3, CARD-4, CARD-5 or CARD-6 e.g. a small molecule, antisense nucleic acid, ribozyme

This 957 bp sequence (TROMPI gene) encodes a precursor rare outer membrane protein (OMP) of species Treponema pallidum, subspecies pallidum. The TROMPI gene was cloned in a procedure where mixed oligonucleotides (31-A,31-C) hybridized to a EcoRI restriction fragment by Southern blot analysis of T. pallidum genomic DNA. DNA fragments were excised from the agarose gel, purified and ligated into the lambda ZAP II vector and probed with 31-A and 31-C. The phage clones were converted to the pBluescript SK(-) recombinant plasmid by in viomexection. The recombinant expression of these rare OMP's can be used for diagnostic tests to detect syphilis and for development of host immunity during syphilis.

New genes encoding proteins involved in a plant polysaccharide biosynthetic pathway, useful for modulating or altering the polysaccharide content, composition or structure of the plant

Claim 1; Page 140; 301pp; English.

The present invention describes isolated polynucleotides (PN) comprising a sequence selected from one of 835 nucleotide sequences given in AAA67073 to AAA67907, their (reverse) complements, sequences producing an Expectation (E) value of 0.01 or less compared to the 835 sequences,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequences at least 50% identical to them, 200, 100, 40 or 20-mers of the 815 sequences of sequences that are degenerately equivalent or allelic to the 835 sequences. The polynucleotides are used to modify the activity of a polypeptide involved in a polysaccharide biosynthetic pathway in the plant. They are especially used to modulate or after the polysaccharide content, composition or structure of the plant. AAB16268 to AAB16340 are proteins encoded by some of the polynucleotide sequence given in the present invention.
                                                                                                 Calpain is a human leukodyte derived calcium dependent cysteine protease. Calpain can be used to screen for compounds that activate or inhibit its proteolytic activity. Calpain DNA can be used to treat or prevent cancer, cerebral apoplexy, cerebral infarction, subarachnoid haemorrhage, Alzheimer's disease, myodystrophy, cataracts, ischaemic heart disease, atherosclerosis, arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Calpain; human; leukocyte; calcium dependent cysteine protease; screening; activator; inhibitor; treatment; prevention; cancer; cerebral apoplexy; cerebral infarction; subarachnoid haemorrhage; Alzheimer's disease; myodystrophy; cataracts; collagen disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 537 BP; 155 A; 119 C; 136 G; 127 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human calpain small subunit cDNA fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         27-APR-1998
                                                            Sequence 640
                                                                                                                                                                                           The present sequence is a calpain small subunit cDNA fragment.
                                                                                                                                                                                                                          Example
                                                                                                                                                                                                                                                   Human calpain protein and related DNA - useful for drug screening and treating cancer, stroke, etc.

CC haha43398 to Aba44239. The proteins can have activities based on the CC tissues and cells the genes are expressed in. Example of activities can have activities based on the CC tissues and cells the genes are expressed in. Example of activities can include: cytostatic; proliferative; vulnerary; immunomodulator; cantidiabetic; antiasthmatic; antirheumatic; antibacterial; antiviral; cc antidiabetic; antiasthmatic; antirheumatic; antibacterial; antiviral; cc dermatcological; neuroprotective; cardiant; thrombolytic; coagulant; cc polynucleotides and polypeptides can be used for preventing, treating or cc maniforating medical conditions and diagnosing pathological conditions. C polynucleotides, polypeptides, antibodies, agonists and antagonists from ct proventing the proliferation, differentiation or mobilisation of the present invention may be used to treat immune disorders by activating cor inhibiting the proliferation, differentiation or mobilisation of the present invention, graft versus host disease and organ crejection, modulate haemostatic or thrombolytic activity, modulate rejection, cancers, cardiovascular disorders, neurological disease and cc inflammation, cancers, cardiovascular disorders, neurological disease and cc agonists and antagonists may be also be used in drug screens. AAC78449 to catcher the present invention of the present invention of the present invention of the present invention.

New human signal peptide-containing proteins useful in treatment, prevention and diagnosis of e.g. cancer, inflammation and cardiovascular disease

Claim 9; Page 257-258; 327pp; English.

cc be used in gene therapy. HSPP can be used to treat or prevent disorders of activity or function of HSPP. Antagonists of continuing a specific ancient of HSPP. Antagonists of continuing cancer), inflammation, cardiovascular, neurological, reproductive or developmental disorders, (e.g. arteriosclerosis, corribosis, poorisis, acquired immune deficiency syndrome, anaemia, corribosis, poorisis, and for the recombinant production of HSPP, for diseases, schizophrenia, ovulatory defects, muscular dystrophy). HSPP cucleic acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for diseases, schizophrenia, ovulatory defects, muscular dystrophy). HSPP corribosis and monitoring), in gene therapy, as antisense, correspectic variations, and for chromosomal mapping. HSPP are also used to raise specific antibodies (Ab) and to screen for agonists and correlated diseases (in usual immunoassays), as therapeutic antagonists (potential therapeutic agents). Ab are used to diagnose, or AAZ98109 to AAZ98242 encode AAX87224 to AAX87357 which represent the human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anti-cancer, anti-filammatory, antimicrobial, nootropic, hepatotropic, neuroprotective, cardiovascular and antiasthmatic activities, and can

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
